ANMD-MRS14-135 · Carbon Management & Climate Technologies

A Global Sustainability Due Diligence & Market Research Study

WHY THIS REPORT

Carbon offset platforms connect buyers and sellers of carbon credits — spanning marketplaces, removal procurement, project origination, MRV and ratings, and retirement registries. After a period of integrity scrutiny, the voluntary carbon market is rebuilding around verified, high-quality credits. This decision-grade study sizes the global market three ways — value, credits transacted and platform users — across platform function, credit type, application and end-user, across seven regions and four scenarios to 2032, with outlooks to 2050.

SUSTAINABILITY & SDG IMPACT — THE ANMD LENS

Sustainability here is integrity itself — credible offsets channel finance to real climate action, while weak credits enable greenwashing. Credit additionality, permanence and benefit-sharing are therefore the decisive variables that the analysis screens throughout.

Mapped Sustainable Development Goals:

SDG 13 Climate Action	SDG 9 Industry & Innovation	SDG 12 Responsible Consumption	SDG 7 Affordable Clean Energy	SDG 17 Partnerships for Goals
---------------------------------	---------------------------------------	--	---	---

Measurable sustainability outcomes assessed:

- Access to credible, verified offsets and removals
- Transparent pricing and verified climate claims
- Finance channelled to real climate action
- Additionality, permanence and over-claiming as material risks

Framework alignment: Double materiality mapped to GRI, SASB, ISSB, TCFD, TNFD, CSRD and the EU Taxonomy, with greenwashing and SDG-washing screens applied throughout.

REPORT COVERAGE

Geographic scope: North America, Europe, Asia Pacific, Latin America, Africa, Middle East and Rest of World — with named country intelligence. North America is the platform leader (United States) on major marketplaces and removal procurement; Europe is the integrity-standard leader (Switzerland, United Kingdom) on registries and ratings; Asia Pacific is the fastest-growing engine; Latin America and Africa are supply hubs; other regions assessed on their own merits.

MARKET OVERVIEW

From volume-driven marketplaces to integrity-first, removal-weighted infrastructure.

Carbon offset platforms are moving from volume-driven marketplaces to integrity-first, removal-weighted infrastructure. Demand is driven by corporate net-zero claims, integrity reform and removal-credit appetite, against integrity scrutiny, price volatility and additionality challenges. The market is read three ways — value, credits transacted and platform users — and forecast under four scenarios, each region reported separately.

- **North America leads platform innovation** — United States and Canada, on major marketplaces, removal-procurement platforms and corporate buyers
- **Europe drives integrity standards** — Switzerland and the United Kingdom, on registries, ratings agencies and EU scrutiny
- **Asia Pacific grows fastest** — Singapore, China and India, on compliance-market growth and project supply
- **Credit integrity is the differentiator** — MRV, ratings and removal-weighting separate trusted platforms from those exposed to quality scandals

WHY ANMD — THE DIFFERENCE

Most market studies stop at tonnes and revenue. This report is built as a sustainability due diligence instrument — fusing market sizing with ESG, SDG, climate, carbon-integrity and natural-capital intelligence and a decision-ready bankability verdict in a single architecture.

- **Triangulated sizing** — every market read three ways (value (US\$), credits transacted (MtCO₂) and platform users) so value, capacity and volume views reconcile rather than conflict.
- **Region-honest forecasting** — Latin America, Africa and the Middle East reported in full, never hidden inside Rest of World, every forecast resolved to the 2025 base year.
- **Integrated evidence base** — company, patent and project databases linked to the analysis, with published-filing patents and FTO treated as an indicator, not a legal conclusion.
- **No-fabrication discipline** — every estimate carries a data-confidence rating and disclosed sources; gaps are flagged for further diligence, never filled with invented numbers.
- **Anti-greenwashing rigour** — SDG-washing and greenwashing screens plus claim-substantiation checks built into the ESG and project analysis.
- **Decision-first structure** — 9 Parts and 53 Chapters culminating in stakeholder playbooks and a clear, conditions-based investment verdict.
